DYNACORD®

DPC4000 Series
Microprocessor controlled paging stations

General description:

The PROMATRIX® system includes 5 different paging station models and one paging station extension of the DPC 4000 series. All paging stations employ gooseneck microphones and 6 or 8 function keys as well as a covered alarm key (retrofit for DPC 4106). An additional key as well as a keylock switch can be retrofitted. All paging stations are available with 10, 20, 30 and 50 selection keys. All models come with an LC display (2 lines with 16 characters each). The following models are available:

- DPC 4106 with 6 function keys
- DPC 4510 with 8 function keys, 10 selection keys and covered alarm key
- DPC 4520 with 8 function keys, 20 selection keys and covered alarm key
- DPC 4530 with 8 function keys, 30 selection keys and covered alarm key
- DPC 4550 with 8 function keys, 50 selection keys and covered alarm key
- DPC 4350 paging station extension unit with 50 selection keys in addition to any paging station mentioned above.

All paging stations are processor-controlled and provide several monitoring functions including the microphone. All keys are programmable. The keys are easy to label via label strips and MS WORD™ templates.
Line monitoring for the audio cabling as well as for RS 485 control lines provide early recognition and signalling of line interrupts and short circuits. The configuration of the paging consoles are accomplished via PROMATRIX® Designer software. All paging consoles have CE approval as well as UL and CSA recognition and are EN 60849 / VDE 0828 conformable in combination with the PROMATRIX® system.
